Project Design Phase-II
Technology Stack (Architecture & Stack)

Date	30 September 2026
Team ID	9100TeamTrio
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Technical Architecture: Auto Ticket Classification using Flow Designer

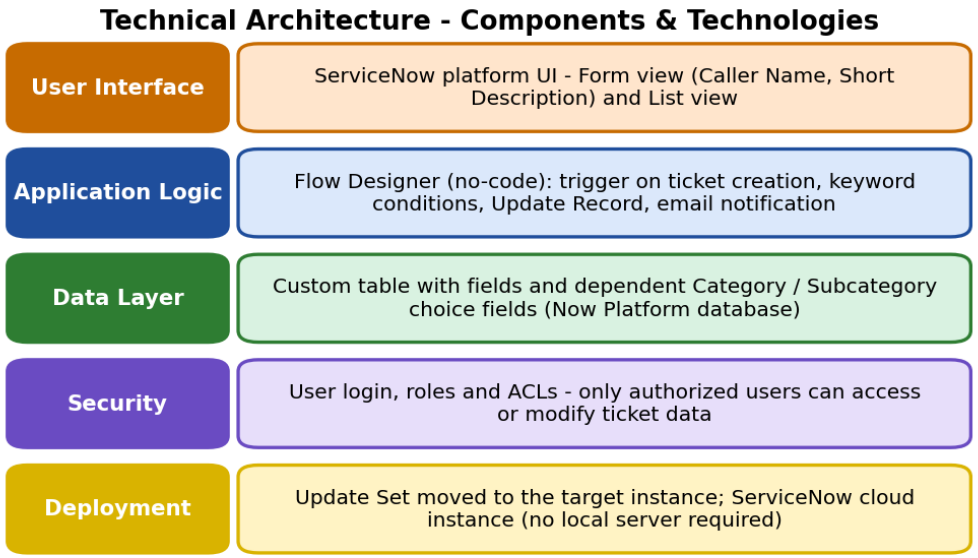

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	Form where the caller enters the Caller Name and Short Description; list view for IT staff	ServiceNow platform UI (Form view, List view)
2.	Application Logic-1	Flow that is triggered when a new ticket is created	Flow Designer (Trigger: Record Created)
3.	Application Logic-2	Evaluates the Short Description for the keywords WiFi, Projector, Password / Login and Slow / Hanging	Flow Designer – flow logic (If / Else If conditions)
4.	Application Logic-3	Updates the Category and Subcategory of the ticket and sends the email notification to the caller	Flow Designer – Update Record action, Email notification
5.	Database	Custom table with the fields Caller Name, Short Description,	ServiceNow table (Now Platform

		Category and Subcategory (dependent choice fields)	database)
6.	Cloud Database	Database service provided by the cloud-hosted ServiceNow instance	ServiceNow Now Platform
7.	File Storage	No external file storage required; configuration is captured in an Update Set	Update Set (XML)
8.	External API-1	Not used – the solution is fully native; email notification is sent through the platform	ServiceNow outbound email
9.	External API-2	Not used	N/A
10.	Machine Learning Model	Not used – classification is rule-based keyword matching	N/A (rule-based logic)
11.	Infrastructure (Server / Cloud)	Application deployment on cloud. Local Server Configuration: not required. Cloud Server Configuration: ServiceNow instance	ServiceNow cloud instance

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	No open-source framework used; the solution is built with the no-code Flow Designer	ServiceNow Flow Designer
2.	Security Implementations	Authenticated login, role-based access and ACLs so that only authorized users can access or modify ticket data	ServiceNow roles and ACLs
3.	Scalable Architecture	Cloud-hosted multi-tier platform (UI, application logic, database); new keywords and categories are added as flow conditions	ServiceNow Now Platform, Flow Designer
4.	Availability	Runs on the ServiceNow cloud platform and the flow executes automatically for every new ticket	ServiceNow cloud instance
5.	Performance	Event-triggered flow classifies each ticket as soon as it is submitted, with no manual review or polling	Flow Designer trigger
