Project Design Phase
Proposed Solution Template

Date	30 September 2026
Team ID	9100TeamTrio
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The school IT helpdesk receives multiple support requests every day from students and teachers about network connectivity, hardware failures, account access problems and system performance issues. IT staff manually review each ticket to identify the issue type, select the correct category and subcategory and inform the caller. This manual process is time-consuming, error-prone and not scalable as the number of requests increases.
2.	Idea / Solution description	A no-code automation built with Flow Designer. The caller only enters the Caller Name and Short Description. When the ticket is submitted, the flow evaluates the Short Description for predefined keywords and automatically assigns the Category and Subcategory: WiFi → Network / WiFi; Projector → Hardware / Projector; Password or Login → Access / Forgot Password; Slow or Hanging → Performance / Slow Computer. The caller is informed about the ticket creation by email notification.
3.	Novelty / Uniqueness	Classification happens automatically at the moment of ticket submission without any code. Callers no longer choose categories, the Subcategory choices depend on the Category, and the whole solution is built only with native ServiceNow features (custom table, dependent choice fields and Flow Designer), which makes it easy to maintain and extend.
4.	Social Impact / Customer Satisfaction	Faster ticket handling and less waiting time for students and teachers; consistent classification that removes human error; reduced manual effort for IT staff so they can concentrate on resolving issues; the caller is kept informed about ticket creation.

5.	Business Model (Revenue Model)	The solution is built for the internal school IT helpdesk, so the benefit is saved staff time and faster issue resolution rather than direct revenue. It can be packaged as a reusable Update Set and offered to other schools and colleges as a one-time setup or a managed-service subscription.
6.	Scalability of the Solution	The flow works for any number of tickets without extra staff effort. New keywords, categories and subcategories can be added by adding conditions in Flow Designer, and the Update Set allows the same solution to be deployed to other instances or extended to other departments.
