Project Design Phase
Problem – Solution Fit Template

Date	30 September 2026
Team ID	9100TeamTrio
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ❑ Solve complex problems in a way that fits the state of your customers.
- ❑ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ❑ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ❑ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ❑ **Understand the existing situation in order to improve it for your target group.**

Template:

Canvas Section	Problem – Solution Fit for Auto Ticket Classification
1. Customer Segment(s)	Students and teachers of the school who raise IT support tickets, and the IT helpdesk staff who handle them.
2. Jobs-to-be-done / Problems	Report an IT issue quickly and get the ticket classified correctly. IT staff currently review every ticket manually to identify the issue type, select the category and subcategory and inform the caller – a time-consuming, error-prone process that does not scale.
3. Triggers	Multiple support requests every day (WiFi not working, projector failure, forgotten password, slow or hanging computer); increasing number of tickets; delays and wrong classification noticed by callers.
4. Emotions: Before / After	Before: frustrated, confused about the category, anxious about lost class time (callers); overwhelmed (IT staff). After: relieved, confident and in control, because tickets are classified automatically and the caller is informed.
5. Available Solutions	Manual review and classification of every ticket by IT staff; asking the caller to select the category and subcategory; verbal or phone complaints to the IT room.

6. Customer Constraints	Callers have limited technical knowledge to choose the right category; limited time during class hours; no budget for extra tools, so the solution must use the existing ServiceNow platform.
7. Problem Root Cause	Ticket classification depends on manual effort; there is no automatic rule that reads the Short Description and assigns the Category and Subcategory.
8. Behaviour	Callers submit tickets with a short description and wait; IT staff read each ticket and classify it; callers follow up repeatedly to know the status.
9. Your Solution	A no-code Flow Designer automation that runs when a ticket is submitted, checks the Short Description for the keywords WiFi, Projector, Password / Login and Slow / Hanging, and assigns Category and Subcategory automatically (Network / WiFi, Hardware / Projector, Access / Forgot Password, Performance / Slow Computer). The caller only enters Caller Name and Short Description.
10. Channels of Behaviour	Online: ServiceNow ticket form, list view and email notification to the caller. Offline: visiting or calling the IT room, verbal complaints to IT staff.
