Project Design Phase-II
Data Flow Diagram & User Stories

Date	30 September 2026
Team ID	9100TeamTrio
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. For the Auto Ticket Classification solution it shows how the Caller Name and Short Description enter the system, how Flow Designer evaluates the description for predefined keywords (WiFi, Projector, Password / Login, Slow / Hanging), how the Category and Subcategory are assigned, and where the ticket data is stored.

Data Flow Diagram (Level 1) - Auto Ticket Classification using Flow Designer

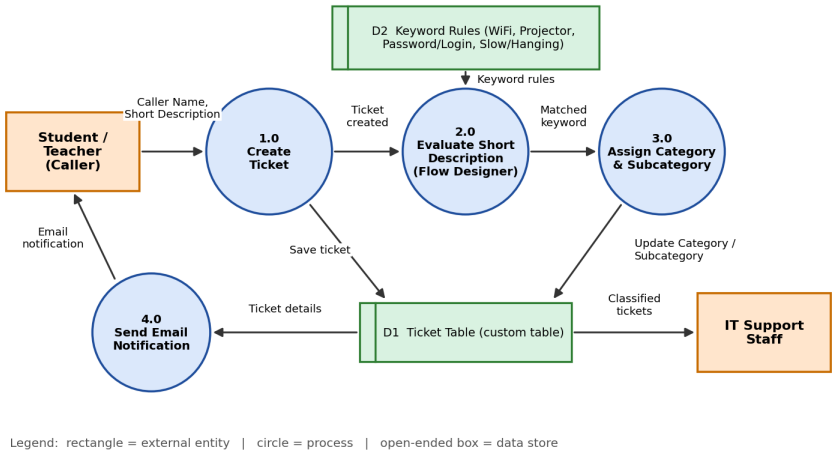

Figure 1: Level-1 Data Flow Diagram of the Auto Ticket Classification solution – the caller submits the Caller Name and Short Description, Flow Designer evaluates the keywords and updates the Category and Subcategory, and the caller is notified by email.

User Stories

The table below lists the user stories of the Auto Ticket Classification solution.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Administrator / Developer	Requirement Analysis & Planning	USN-1	As a developer, I can analyse the business use case of the school IT helpdesk so that the manual ticket classification problem and the expected automation are clearly defined.	Business use case (problem, goal and expected outcome) is documented	High	Sprint-1
Administrator / Developer		USN-2	As a developer, I can create a new Update Set so that all configuration changes are captured in one package.	New Update Set is created and set as the current update set	High	Sprint-1
Administrator / Developer		USN-3	As a developer, I can document the navigation steps in Picture View so that the configuration can be followed and repeated.	Navigation steps are documented with screenshots	Medium	Sprint-1
Administrator / Developer	Backend Development & Configuration	USN-4	As an administrator, I can create a custom table to store ticket records so that all IT support tickets are saved in one place.	Custom table is created and ticket records can be stored in it	High	Sprint-1
Administrator / Developer		USN-5	As an administrator, I can create fields (Caller Name, Short Description, Category, Subcategory) with the correct data types so that the required ticket details can be captured.	All fields are available on the ticket form with the correct data types	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Administrator / Developer		USN-6	As an administrator, I can make the Subcategory choices depend on the selected Category so that only valid subcategories are listed.	Subcategory list changes according to the Category selected	High	Sprint-1
Student / Teacher (Caller)	Automation using Flow Designer & Email Notification	USN-7	As a student or teacher, I only enter my Caller Name and Short Description, and the ticket is automatically assigned the correct Category and Subcategory (WiFi → Network / WiFi, Projector → Hardware / Projector, Password or Login → Access / Forgot Password, Slow or Hanging → Performance / Slow Computer).	Flow runs when the ticket is submitted, Category and Subcategory are filled in automatically and the caller is informed about the ticket creation	High	Sprint-2
IT Support Staff	Testing, Validation & Security	USN-8	As IT support staff, I can verify that a ticket containing the keyword WiFi is classified correctly (Test Scenario 1) so that I do not have to classify it manually.	Category = Network and Subcategory = WiFi	High	Sprint-2
IT Support Staff		USN-9	As IT support staff, I can verify that a ticket containing the keyword Projector is classified correctly (Test Scenario 2).	Category = Hardware and Subcategory = Projector	High	Sprint-2
IT Support Staff		USN-10	As IT support staff, I can verify that tickets containing Password / Login or Slow / Hanging are classified correctly (Test Scenario 3).	Category = Access, Subcategory = Forgot Password / Category = Performance, Subcategory = Slow Computer	High	Sprint-2
Administrator / Developer	Deployment & Conclusion	USN-11	As a developer, I can make the Update Set Complete so that the solution is ready to be deployed to the target environment.	Update Set is in Complete state	Medium	Sprint-2
Project Team		USN-12	As a team, we can conclude the project with complete documentation so that the solution can be demonstrated and reused in future.	Project documentation and conclusion are completed	Low	Sprint-2
